The Vice Chancellor's Message

PROF. DR. MUHAMMAD UMAR

Vice Chancellor RMU

World is now a global village where interdependence and connectivity has progressed in each and every phase of our lives. This has also led to important evolutions and advancements in the field of Medical Science where Evidence based Practice and Research have emerged as its imperative constituents. There had always been great emphasis on the fact that Research is crucial for development of scientific thinking. In the absence of critical evaluation of information, an art imparted only through quality research; medical professionals may imperil the health and well being of their patients. Attention should be focussed on involving the medical professionals in health systems research, right from their undergraduate levels.

Developing countries have timely apprehended research as a significant protagonist in formulation of their health policies and decision making processes, training in research and its capacity development is now a top precedence of all the medical institutions of our country. I take most pride and gratification for establishing the first ever platform of Research established at RMU, Rawalian Research Forum, decades back, which was able to amass a substantial database of the work done by the faculty of RMC and Allied Hospitals. With concreted efforts the faculty of RMC has been constantly contributing to the knowledge bank of medical research in Pakistan. Owing to my special concentration on capacity development in research at RMU, we led to some pioneer measures include, establishments of first ever Institutional Research and Ethics Forum of RMU (IREF), Research Unit at Department of Medical Education, Rawalian Student's Research Society (RSRS), Research Directory of RMU faculty and staff, various national and international research collaboration and most importantly the first ever supplement of Students Journal of RMC in 2015. However, today this publication of a Research Directory of RMU is like icing on the cake. It is compilation of all the research activities and deliverables of RMU over last 6 years. The research proposals, projects and publications that have been produced and the research presentations made are honour for the institution.

In short, it is my immense pleasure and privilege to oversee professional development of the institute in the field of research. This Research Directory of RMU represents yet another opportunity to empower and represent Rawalpindi Medical University and Pakistan to the highest echelons in the ever developing field of research and science.

Preamble

Research is the primary function of the medical university towards creation of new knowledge, discovery of new drugs, clinical trial, improvement in diagnostics, innovation in techniques and instrumentation all over the world. In order to develop Rawalpindi Medical University into a true center of excellence, it is imperative that apart from maintaining high standards in teaching, research is rigorously pursued and suitably rewarded. The research output of Rawalpindi Medical University is in line with national needs and contributes towards socio-economic growth of the country. Over the years, the Rawalpindi Medical University has made a concerted effort to remain actively involved in medical research. Through epidemiological surveys, clinical trials, workshops and seminars, the university's Vice Chancellor Professor Muhammad Umar hisfaculty, students and collaborators all share in the responsibility for promoting and verifying good practice and creating an ethos of professionalism and integrity in the university's research culture. Under the great leadership of Prof. Muhammad Umar RMU is also represented at major conferences across the country as well as outside the country, where our leaders share data and research findings with other thought leaders in the healthcare industry.

It is to the credit of the current leadership of the Rawalpindi Medical University that they realized the need for this body of work to be compiled. Science today is changing rapidly, so no single researcher or site can lay claim to all the expertise necessary to develop and validate medical innovations. Thus, efficient sharing of information between institutions has become even more important. The office of research, Innovation & commercialization (ORIC) has been established at Rawalpindi Medical University is acting as a focal point for providing guidance and support to the constituent institutions in all activities related to research. As such, ORIC has a significant role to play towards achieving Rawalpindi Medical University vision. Therefore, the mission of this Directorate is to facilitate and co-ordinate research activities of Rawalpindi Medical University constituent institutions/hospitals and to liaise with other national as well as international academics, research and industrial organizations to facilitate research at Rawalpindi Medical University.

The publication of this research directory will provide the medical community with an opportunity to analyze and learn from the work done by the faculty of Rawalpindi Medical University over the years. Hopefully, it will also prove to be a spark of inspiration for the students of Rawalpindi Medical University to discover new avenues and paths in the world of medical research.

I remain grateful to Vice Chancellor, Prof. Muhammad Umar for trusting me with this responsibility. This is the first undertaking of this nature and hence many shortcomings may be present. I take full responsibility and will be happy to incorporate any changes recommended by the faculty.
